

# SPUR SHIELD® WOUND SEALANT

Recent field studies conducted by Chile's leading wood canker disease specialist, Blanca Luz Pinilla, indicated that **SPUR SHIELD** significantly reduced the amount of inoculum that was able to penetrate into pruning wound cuts of cherries, plums, wine and table grapes.

**SPUR SHIELD** is a natural resin barrier which may be applied through commercial spray equipment compared to labor intense hand painting. Based on these results there is no doubt that having **SPUR SHIELD** in Chile, would be a tremendous tool for Chilean fruit producers.
